LOCAZ

Booking Platform
Product Requirements Document

Self-service car & van rental — web app, admin back office and API

Prepared for	Aziz LANDRI, LOCAZ
Prepared by	Shakil Khan
Version	2.2 — final agreement
Date	20 October 2026
Status	Final — agreed in the meeting of 20 October 2026; replaces all earlier versions

Contents

11. What LOCAZ provides

Appendix A — Feature comparison: RentHub, Fleetee, LOCAZ

Appendix B — C-Access (Convadis) reference

Appendix C — Glossary

1. Summary

LOCAZ rents cars, vans and trucks in Nice on a self-service basis. RentHub has ended. LOCAZ needs its own platform, running **before the end of 2026**, that it can show to investors and banks in early 2027.

This document defines **exactly** what the first version (the **MVP**) includes for the agreed fixed price of **3,000 USD**, and what comes after.

The rule is simple: everything listed in Section 4 is in the MVP; everything else is not.

The MVP is a web platform:

1. **Booking website** on `locaz.co/booking` — search, price, options, account at checkout, verification, contract, payment.
2. **Admin back office** — fleet, prices, planning, bookings, customers, and a dashboard that replaces LOCAZ's Excel tracking.
3. **Contrazy** as the engine for identity checks, documents, contract and e-signature, payment, deposit, **check-in/check-out photos** and disputes.
4. **90-day card protection**: the customer's card is secured at booking, so LOCAZ can charge damage, fuel, tolls, towing, parking fines (FPS) and ticket admin fees for **90 days after return**. This follows LOCAZ's *Stripe Deposit Spec v2.1* (its V1 part).
5. **C-Access key box (Convadis)**: each booking becomes a digital key; the customer unlocks the vehicle with the phone, so LOCAZ can test keyless rentals before launch.

After the MVP: the LOCAZ mobile app, which is needed for offline use in parking garages.

This version is based on:

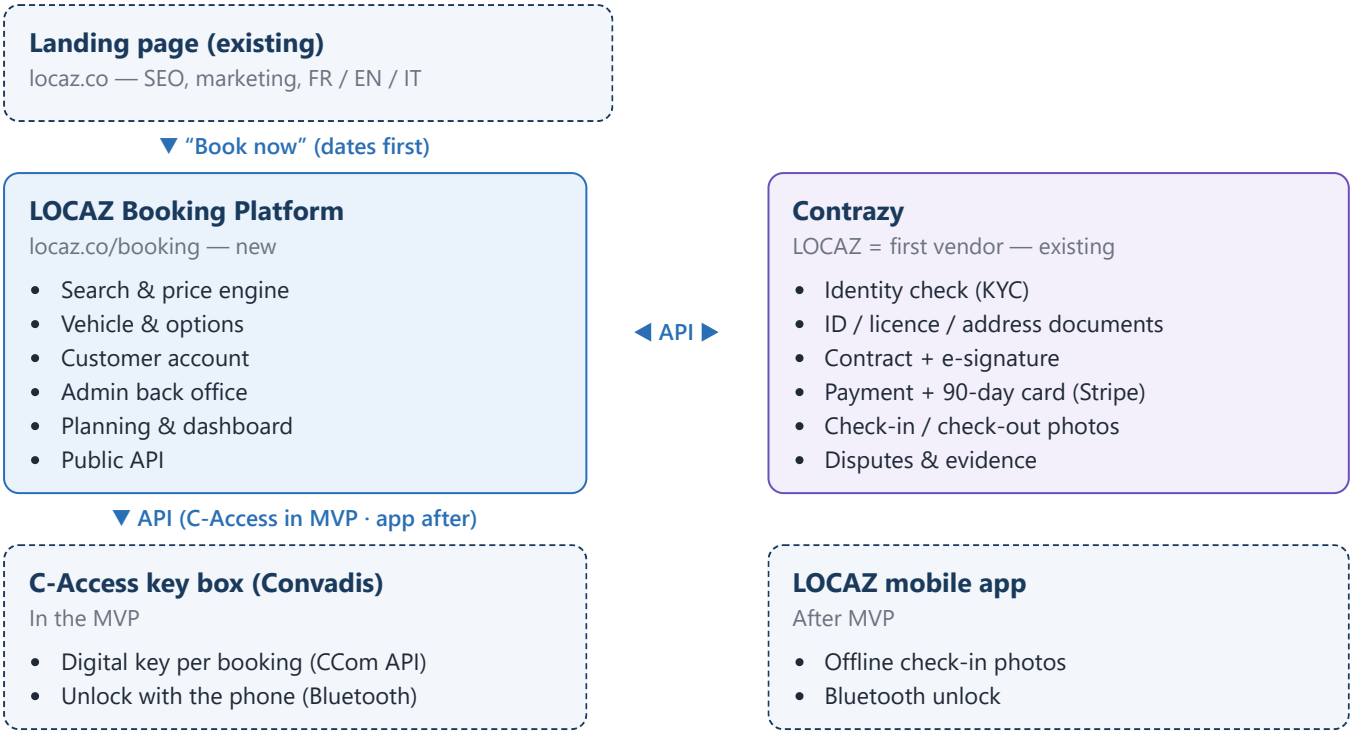

- the meetings of 13 and 20 October 2026 (full transcripts reviewed);
- a live read-only check of the Contrazy Stripe account (20 October 2026);
- LOCAZ's *Stripe Deposit Spec v2.1*;
- the Convadis C-Access documents, offer and API documentation;
- LOCAZ's revenue and fleet spreadsheet;
- a complete read-only review of Fleetee (trial account, 14 October 2026);
- the earlier review and data export of RentHub;
- the current Contrazy code.

2. Goals

Goal	Measure
Replace RentHub and the Excel files	Bookings, fleet, prices, costs and revenue are all managed in the platform
Customers book 100% online, on their phone	A booking takes less than 5 minutes, without calling or WhatsApp
Secure every rental	Verified ID and licence, signed contract, pickup/return photos, card secured for 90 days
Show the business to investors and banks	Dashboard with revenue, occupancy, channels and margin per vehicle
Be ready to grow (9 vehicles today → 50 by end of 2027)	Adding vehicles, places or categories needs no developer

Goal	Measure
Prepare keyless rental and the app	The platform is built so the device and the app plug in without rework

3. Product boundary

- **Money:** all payments go to **LOCAZ's own Stripe account**, connected through Contrazy (about 10 minutes to set up, business type "car rental"). LOCAZ is paid directly by Stripe.
- **Domain:** `locaz.co/booking`, on the same domain as the landing page.

4. MVP — included in the 3,000 USD

4.1 Admin back office

Area	What is included
Company settings	Company details, logo, booking rules (minimum age 21, licence 1 year, minimum notice, maximum length 30 days, booking up to 6 months ahead), return rules (30-minute late tolerance then 1 extra day, fuel €36 + €3.50/L), cancellation rules
Users and roles	Super admin (Aziz), Administrator, Operator, Operator assistant; invite by email; audit trail of changes
Places	Pickup/return places (Nice Gare, Aéroport, Ville, Collinettes…) grouped by city; address, opening hours for staffed delivery
Fleet	Categories, models ("Renault Master or equivalent"), vehicles. Vehicle record follows LOCAZ's fleet sheet: plate, VIN, brand, model, trim, first registration, fuel, seats, category (car / van / truck), current km, status, insurer and renewal date, technical inspection date, purchase price, preparation costs, market value

Area	What is included
Pricing	Per category, not per model. Daily prices weekday and weekend; prices for 1–6 days and longer tiers; hourly prices; week and month packages; km included per day or package, or unlimited; extra-km price; one-way fees between places
Options and protection	Options per day or fixed (extra driver, baby seat, tow bar, hand truck, airport/station delivery), with optional maximum price. Protection levels **Standard / Comfort / 0 Franchise** with daily price, deductible and deposit per category (e.g. deductible €1,600 vans / €1,200 cars; Comfort €650; 0 Franchise €0)
Planning calendar	One row per vehicle, bookings and unavailability (maintenance, repair) on a timeline; day / week / month views; filters; create a booking or a block by selecting dates; move a booking to another vehicle of the same category
Bookings	Manual bookings (phone, walk-in, Getaround, Turo, friends) with a **source** field; manual discount (e.g. direct-customer discount) with reason; status flow from *Pending payment* to *Closed*; send the customer a secure link to complete verification, contract and payment
Customers	Customer list and profile (identity, licence, bookings, payments, notes); **blacklist** with reasons (Smoker, Dirty, Fuel not refilled); a blacklisted customer cannot book online
Vehicle costs	Enter costs per vehicle (insurance, registration, repairs, tyres, servicing, tolls, Getaround box…) with date and amount
Dashboard	Replaces the Excel tracking: revenue by month, **by channel** (website, direct, Getaround, Turo, friends) and by vehicle/category; number of rentals; days rented; average price per day and per rental; average rental length; occupancy rate; **margin per vehicle** (revenue − costs) and payback vs purchase and preparation price; insurance cost per month; CSV export
Data import	One-time import of the existing data: fleet list, customers (with blacklist flag), RentHub settings and prices, and the revenue and cost history from the Excel file, so the dashboard starts with real numbers

4.2 Booking website (`locaz.co/booking`)

- **French, English and Italian** (more languages can be added later). Mobile first. Dates-first search box, also embeddable on the landing page.
- The Contrazy screens (identity check, contract signature, check-in/out) are in French and English at launch; Italian for those screens comes after the MVP.
- **Search → results → options → summary → account → verification & contract → payment → confirmation.**
- **Results:** one card per category ("Model or equivalent"), with photo, seats, gearbox, fuel, km included and the **total price**. The best price (daily or package) is chosen automatically.
- **Summary:** shows the rental, options, one-way fee, km included, extra-km price, deductible, deposit, cancellation rules and the **90-day card consent**, all before payment.
- **Account:** created only at checkout. The email is verified by a one-time code; the phone number is collected.
- **Customer area:** bookings, documents, contract, receipts; cancel with the refund rule shown.
- **Emails:** confirmation, pickup reminder, return reminder, return receipt, every post-rental charge with its proof.

4.3 Contrazy connection

Step	Included
Identity check	ID or passport with matching selfie (Stripe Identity), driving licence front and back, proof of address when required

Step	Included
Contract	Rental contract generated with the booking details (vehicle, plate, dates, places, km, options, protection, deductible, deposit) and signed on the phone; signed PDF stored
Payment	Rental paid online in full by card (3-D Secure) to LOCAZ's Stripe account
Check-in / check-out	**Mandatory photos** at pickup and return (guided: outside, dashboard with km and fuel, interior), km and fuel readings, damage photos and notes; automatic calculation of extra km, fuel and late return at check-out
Disputes	Damage and claim cases with the evidence pack (contract, photos, consent, notices)
Contrazy extensions	Built as part of the MVP: partner API (API keys) so the LOCAZ platform creates bookings in Contrazy; webhooks back to LOCAZ for each step; return link to `locaz.co/booking` ; rental fields in the contract; start/end date-time on bookings; selfie option in identity checks; saved card and post-rental charges (4.4)

4.4 90-day card protection (Stripe Deposit Spec v2.1 — V1)

How it works for the customer: at booking, the card is **secured by Stripe** (3-D Secure once) and the customer ticks the consent box. This is a security step like Swikly or Gando, not "save my card for next time". LOCAZ never sees or stores the card number.

Spec section	Included in the MVP
§4 Card secured at booking	Stripe customer + card token on LOCAZ's Stripe account. Paid online bookings save the card with the payment; cash or agency bookings use a "card as security only" step
§5 Hold at pickup	Optional hold (e.g. €800) placed when the vehicle is handed over; captured (full or partial) or cancelled at return
§6 Consent	Mandatory checkbox, unticked by default, French text (English shown alongside); logged with date, IP, browser, terms version and exact text
§7 Charges after return	Admin selects booking, charge type (damage, fuel, toll, towing, FPS, ticket admin fee), amount and proof → card charged off-session; customer receives the receipt and proof
§8 Caps	Server-side limits editable in the admin: global cap per booking (= deductible), cap per charge type, one ticket admin fee per notice, proof required for FPS / tolls / towing
§9 Safety and retries	One idempotency key per attempt and one charge per row (no double charge); signed Stripe webhooks; automatic retry rules by decline type (e.g. insufficient funds: up to 3 retries; authentication required: no retry, payment link)
§10 Failed charges	Secure payment link sent automatically; reminders at D+3, D+7, D+14; flag for collection after D+14
§11 Refunds	Full or partial refunds (e.g. FPS cancelled on appeal), executed at Stripe, with a reason
§12 Evidence and data	Stripe IDs, consent log, contract, photos, notices, invoice and emails kept 13 months after the last charge; card data only at Stripe
§13 90-day window	`return date + 90 days` shown on each booking; new charges blocked after it; admin alert at D+75; card detached automatically after the window if nothing is open
§17–§18 Quality	Separate test and live Stripe keys, secrets outside the code, full QA checklist (15 scenarios) passed in Stripe test mode before going live

Traffic fines (speed camera, red light) are **never charged** by LOCAZ. LOCAZ designates the driver on ANTAI (legal deadline: 45 days) and only charges its admin fee. The platform shows the driver details needed for the designation.

Adjustments to the spec (agreed approach):

- The card and customer are saved on **LOCAZ's own Stripe account** through Contrazy.
- There is **one Stripe customer per client**, reused for every booking, not one per booking.
- Stripe may update reissued cards automatically. This doesn't work for every card, so the card-update link from the spec is kept.
- A 30-day hold for car rental is possible if Stripe enables it on LOCAZ's account. It's optional, and the saved card covers everything else.
- The consent text and price schedule need a **legal check** by LOCAZ before launch.
- The ID-retention period must be aligned with the privacy policy (spec: 13 months; current policy: 12 months).

4.5 C-Access key box (Convadis) — web integration

Moved into the MVP at LOCAZ's request (meeting of 20 October 2026), so keyless rentals can be tested before launch.

Item	Included
Vehicles	Each LOCAZ vehicle linked to its C-Access device in Convadis's CCom server (REST API, OAuth2)
Digital keys	Each confirmed booking creates a reservation in CCom (vehicle, start/end time, authorised driver); changes and cancellations are synced
Customer access	The customer receives a link / QR code to load the key into **Convadis's C-App** and unlocks the vehicle by Bluetooth, even with no network
Rules	The key is only active during the rental, and only after the pickup check and the card security step are done
Usage events	Unlock/lock times read back from CCom and shown on the booking
Admin	Device status per vehicle; cancel or end a key from the booking
Testing	With LOCAZ's sample device and/or Convadis's development kit (car simulator)

The LOCAZ mobile app (with Convadis's SDK built in, instead of C-App) comes after the MVP.

4.6 Step switches (testing mode)

The admin can switch steps of the rental process on or off, globally or per booking, while LOCAZ is testing (as already done in Contrazy). This covers:

- identity check;
- documents;
- contract signature;
- check-in photos and check-out photos;
- the hold at pickup;
- the C-Access digital key.

For example, check-in photos can be switched off until the mobile app exists. The card security step stays on for online bookings.

4.7 Invoices

- A rental invoice PDF for every booking, and one for every post-rental charge: sequential numbering, LOCAZ company details (SIREN, VAT number), customer details, VAT breakdown.
- A credit note for every refund.
- Sent to the customer by email and available in the customer area and the admin.
- CSV export for the accountant.

4.8 Delivered with the MVP

- Setup of `locaz.co/booking` on LOCAZ's domain (Vercel), with LOCAZ's Stripe account connected through Contrazy.
- A short admin guide, plus a handover session.
- Bug fixes for the delivered scope after launch.

5. Not in the MVP — after the MVP

These are planned and the MVP is built to accept them, but they are **not included in the 3,000 USD**. Each one is agreed in writing before work starts.

Item	Why it comes after
LOCAZ mobile app (iOS / Android): offline check-in photos, Bluetooth unlock via the Convadis SDK (replacing C-App), push notifications	A website cannot work without network in a parking garage; only an installed app can. Needs a developer experienced with Bluetooth / hardware; Shakil helps LOCAZ find and brief one
Spec v2.1 Phase 2: full chargeback workflow, two-person approval above €200, roles per agency, monitoring and alerts	Spec marks them Phase 2; the MVP has the V1 minimum (admin email on dispute, single admin role for charges)
Quotes with expiry date and 50% advance payment	The MVP covers direct customers with a manual discount + payment link
Coupons / promo codes, seasonal and dynamic pricing	Can be added once real booking data exists
Maintenance module (interventions, vehicle reports with photos, deadline reminders)	The MVP has vehicle costs and inspection/insurance dates
Traffic ticket workflow (statuses, contest tracking, automated ANTAI export)	The MVP charges the admin fee and shows driver details
Getaround / Turo automatic sync	The MVP records their bookings manually with the source
Customer reviews, SMS/WhatsApp, marketing emails	Not needed to run the business at launch
Switching identity checks to Didit (free up to 500 checks/month)	The MVP uses Stripe Identity, already built
Full accounting (purchase orders, suppliers, cash book) and French e-invoicing platform connection	Handled by the accountant; the MVP issues rental invoices and exports CSV
Multiple agencies with agency managers	One company, several places, in the MVP
Apple Pay / Google Pay, Google sign-in, SMS phone verification	The MVP uses card payment and email verification

Item	Why it comes after
Two-factor authentication for admins	The MVP uses roles and strong passwords
Damage marks on a car diagram	The MVP records damage with photos and notes
Italian on the Contrazy screens (identity, contract, check-in/out)	The LOCAZ site and emails are in Italian in the MVP

6. Customer journey (web)

1. **Search:** pickup and return place, dates and times.
2. **Results:** vehicles with total price and km included.
3. **Options:** protection, extra driver, baby seat, delivery…
4. **Summary:** full price, deductible, deposit, cancellation rules, 90-day card consent.
5. **Account:** created at checkout.
6. **Verify and sign:** licence, ID, selfie, contract signed on the phone.
7. **Pay:** rental paid; card secured for 90 days.
8. **Pickup:** guided photos, km and fuel; the C-Access digital key becomes active and the customer unlocks with the phone (or key handover for vehicles without a device).
9. **Return:** photos, km and fuel; extra km, fuel and late fees calculated; hold settled.
10. **Up to 90 days after return:** FPS, tolls, towing or ticket admin fees charged with proof if needed.

7. Non-functional requirements

Topic	Requirement
Mobile first	Every customer step works on a phone
Performance	Search results in under 2 seconds
Security	HTTPS; card data only at Stripe; signed webhooks; role-based access; strong passwords; secrets outside the code
GDPR	Consent, privacy policy, retention periods (identity documents, photos, payment data), export/deletion on request
Languages	French (default), English and Italian
Hosting	Vercel; managed PostgreSQL on the same provider as Contrazy (Neon, EU), separate database; daily backups
Technology	Same stack as Contrazy: Next.js, PostgreSQL/Prisma, Stripe, Cloudinary, Resend
Devices	C-Access integrated through Convadis's CCom API (Section 4.5); the platform is ready for the mobile app to replace C-App

8. Stripe account structure

Checked live on 20 October 2026:

- **Platform account "Contrazy":** owned by **LYNAEL** (France, company), fully verified, payments and payouts active, nothing outstanding.
- **Connected accounts:** none yet in live mode.

Decision: no new company is needed now.

Account	Owner	Role
Contrazy platform	LYNAEL (holding)	Runs Contrazy: Connect, identity checks, platform settings
LOCAZ connected account	**LOCAZ SAS**	Receives all LOCAZ payments and payouts; holds LOCAZ's customers and the 90-day saved cards; business type car rental (MCC 7512)

- LOCAZ connects from its Contrazy dashboard (about 10 minutes) in the name of LOCAZ SAS, with its own bank account. Customers see LOCAZ on their bank statement.
- **If a new tech company is created later:**
  - Stripe generally doesn't move an account to a different legal entity (and never to another country), so that company opens its own platform account and LOCAZ reconnects to it (about 10 minutes).
  - LOCAZ's history and payouts stay in its existing account.
  - Saved cards are only used for 90 days, so the switch has little impact.
  - The platform keys are configuration only; no code change.

9. Timeline

Work starts when the upfront payment is received (expected the week of 26 October). Progress is shared on Google Chat and on GitHub, with a demo at the weekly Tuesday meeting.

Period	Delivered
Week 1 (from ~26 Oct)	Setup, data model, company settings, users, places, fleet, data import
Weeks 2–3	Pricing engine, options and protection, planning calendar, manual bookings, customers, step switches
Weeks 4–5	Booking website (FR/EN/IT), Contrazy connection (identity, contract, payment), card secured + consent
Week 6	Check-in/check-out photos, 90-day charges (caps, retries, links, refunds, window), invoices
Week 7	C-Access integration and tests with the device / dev kit, dashboard, emails
Week 8 (14–18 December)	Full QA in Stripe test mode, fixes, go-live on `locaz.co/booking`, **final MVP delivery** (mid-December, at the latest in the 3rd week of December)
From January 2027	Tests with real customers, fixes and updates
February 2027 (target)	After MVP: LOCAZ mobile app (offline + Bluetooth unlock), depending on the mobile developer

The C-Access tests depend on Convadis providing API access and the sample device or dev kit by mid-November.

10. Commercial terms

Item	Terms
MVP fixed price	**3,000 USD** for everything in Section 4

Item	Terms
Payment	**1,800 USD upfront** to start (October 2026), of which 300 USD covers the AI development tools used throughout the project · **1,200 USD at final delivery** (mid-December, at the latest the 3rd week of December 2026)
Total	**3,000 USD** — the 300 USD is part of this total, not an extra
Ownership	Code and data belong to LOCAZ; no licence fee or subscription
Not included	Section 5 items; third-party costs paid directly by LOCAZ: Stripe fees (payments and Stripe Identity checks, about $1.50 each), hosting (Vercel, database, Cloudinary, Resend), Convadis devices and subscription (€215/device + €4.40/month), Convadis dev kit (€350, refundable)
After the MVP	Next phases (mobile app, extras) are scoped and agreed in writing before work starts
Agreement	A written agreement based on this PRD is signed by both parties before work starts

11. What LOCAZ provides

1. The signed agreement and the upfront payment (1,800 USD).
2. Connects LOCAZ SAS's Stripe account in Contrazy (about 10 minutes, business type "car rental").
3. Access to the domain (GoDaddy) to set up `locaz.co/booking`.
4. Final prices per category: daily, packages, options, protection, deductibles, deposits. They can also be set directly in the admin.
5. Legal check of the 90-day consent text and the charge price schedule; updated CGV and privacy policy (fuel €36 + €3.50/L, protection names, licence 1 year, Stripe instead of Swikly, 90-day card clause).
6. Photos of the vehicles and places, and the logo.
7. By mid-November: the C-Access sample and/or Convadis development kit, and CCom API access (client credentials) from Convadis.
8. Italian texts reviewed by LOCAZ (translations are prepared in the platform).

Appendix A — Feature comparison: RentHub, Fleetee, LOCAZ

Built from the RentHub review (27 Sept 2026) and the Fleetee trial review (14 Oct 2026). **MVP** = included in the 3,000 USD. **After** = Section 5.

Feature	RentHub	Fleetee	LOCAZ
Fleet: categories, models, vehicles	Yes	Yes (types, categories, assets, Excel import)	**MVP**
Places / agencies with opening hours	Yes	Yes (agencies)	**MVP** (places) · multi-agency after
Planning calendar (day/week/month)	Yes	Yes (day, week, month, 3 months)	**MVP**
Booking sources	Yes (origins)	Yes (on site, phone, online + custom)	**MVP** (website, direct, Getaround, Turo, friends…)
Booking rules (minimum notice, max advance, min duration)	Yes	Yes (+ overbooking, manual price edit, past bookings)	**MVP**

Feature	RentHub	Fleetee	LOCAZ
Daily prices, weekday/weekend, duration tiers	Yes	Yes (price grid by category)	**MVP**
Hourly prices	Yes	Yes	**MVP**
Packages (week / month, km included)	Yes	Yes (tariff packages by start day, duration, km, season)	**MVP** (week, month)
Km tiers / unlimited km	Yes	Yes (km tiers, priced)	**MVP**
Options (per day / fixed, max price)	Yes	Yes (+ option groups)	**MVP**
Protection levels with deductible and deposit	Yes	Yes (franchise levels, deposits per category)	**MVP**
One-way / return fees	Yes	Yes (return fees, cancellation fees)	**MVP**
Seasons and dynamic pricing	Yes	Yes (season calendar, pricing groups)	After
Coupons	Yes	Yes (validity, max uses, duration, category)	After
Online booking website	Yes (booking engine)	Yes (website builder, deposit %, customer date changes)	**MVP** (`locaz.co/booking` , account at checkout)
Online check-in before rental (driver info, licence)	Not used	Yes (3 days before)	**MVP** (via Contrazy, at checkout)
Identity check with selfie	No	Not shown (licence upload, manual validation)	**MVP** (Contrazy / Stripe Identity, selfie option enabled)
E-signed rental contract	Remote signature setting	Yes (documents center)	**MVP** (Contrazy)
Online payment	Yes	Yes (payment links)	**MVP**
Online deposit	Card deposit settings	Yes (online deposit)	**MVP** (pickup hold + **90-day saved card**)
Charges after return (fines, tolls, damage) with consent	No	Not shown	**MVP** (spec v2.1 V1)
Check-in / check-out with photos	Yes (checklist)	Yes (Fleetee Check app, vehicle tour)	**MVP** (web) · offline app after
Damage claims / disputes	Yes	Yes (claims list)	**MVP** (Contrazy disputes)
Traffic tickets	Yes	Yes (statuses, contest)	**MVP** admin fee + driver details · full workflow after
Quotes	Yes	Yes (expiry date)	After (MVP: discount + payment link)
Customers, blacklist	Yes	Yes (private / business, import)	**MVP**
Users and roles	Yes	Yes (admin, agency manager, agent, per-module access)	**MVP** (4 roles)
Vehicle costs / maintenance	Yes	Yes (interventions, reports)	**MVP** costs · maintenance module after

Feature	RentHub	Fleetee	LOCAZ
Dashboard (revenue, occupancy, channels, avg price)	Basic	Yes	**MVP** (+ margin per vehicle, payback)
Invoices	Yes (full accounting)	Yes (deposit / rental / balance invoices)	**MVP** rental invoices + credit notes · full accounting after
Customer reviews, emails log	Yes	Yes	After
Keyless device	GPS menu (not used)	Not shown	**MVP** (C-Access via CCom + C-App)
Mobile app	No	Fleetee Check (staff inspections)	After (customer app, offline)
Monthly cost	Subscription	From 97 € HT/month (complete plan, < 20 vehicles)	None (owned)

Appendix B — C-Access (Convadis) reference

What C-Access is

- A Bluetooth (BLE) key actuator: the original vehicle key goes inside, and the box presses lock/unlock.
- It can also block starting the car, for keyless vehicles.
- The battery lasts about 3 years, with AES-encrypted communication.
- Once the reservation is on the phone, it works fully offline.

How the platform connects

1. Create each vehicle in Convadis's CCom server (REST API, OAuth2).
2. For each booking, create a **reservation** in CCom: vehicle, start/end time, authorised user.
3. Give the customer access to **C-App** (Convadis's app) through a profile QR code or link generated by CCom. Later, the LOCAZ app replaces C-App using Convadis's SDK (CAppLib).
4. Read usage events (unlock/lock times) back from CCom into the booking.

Commercial and practical

- Device pricing: €215 per device (10–49 devices) + €4.40 per device per month. Payment: 50% upfront, the rest in 3 instalments.
- Development kit: €350, refundable within 6 months.
- For vehicles with a physical key, a second key stays in the vehicle and is not secured, as Convadis notes.

Appendix C — Glossary

Term	Meaning
MVP	The first version, included in the 3,000 USD (Section 4)
Card secured / saved card	Card token kept by Stripe, used for charges after the rental with the customer's consent
Hold (pre-authorisation)	Amount blocked on the card from pickup to return (about 7 days maximum)
Off-session charge	Charge made by LOCAZ later, without the customer present, under the consent given at booking

Term	Meaning
FPS	Forfait post-stationnement (municipal parking charge)
Deductible (franchise)	Maximum the customer pays per claim, depending on the protection chosen
CCom / C-App	Convadis's server and phone app for the C-Access key box
Contrazy	LOCAZ's platform for identity, contract, payment, deposit, inspections and disputes
