LOCAZ

Launch version & 90-day card protection

Meeting brief — answer to the Stripe deposit spec v2.1

Prepared for	Aziz LANDRI, LOCAZ
Prepared by	Shakil Khan
Based on	PRD v1.1 · Stripe deposit spec v2.1
Date	13 October 2026

TODAY

Same scope, plus a real solution for the 90-day card

Agenda

- **1.** Launch version: what's included (unchanged scope)
- **2.** 90-day card protection: how it works
- **3.** Our review of your Stripe spec v2.1
- **4.** What's in the 3,000 USD, what's an add-on
- **5.** Identity check: Didit vs Stripe Identity
- **6.** Next steps

Short answer

- Yes: the card is saved at booking and LOCAZ can charge it for **90 days after return**.
- Your spec is the right approach. It matches what we planned in the PRD.
- A working **basic version is included** in the 3,000 USD launch version.
- The full automation from your spec is an **add-on**.

1 · LAUNCH VERSION

What's included — unchanged, plus the basic 90-day card

Admin back office

- Settings, users, roles
- Places, opening hours
- Categories, models, vehicles
- All pricing (daily, weekend, hourly, packages, km, options, one-way)
- Fleet calendar, manual bookings
- Customers, blacklist
- RentHub data import

Booking site

- locaz.co/booking, mobile first
- Dates first, best price chosen automatically
- Options and protection
- Account only at checkout
- Customer area
- Email confirmations

Contrazy connection

- Identity check with selfie
- Licence, ID, proof of address
- Contract and e-signature
- Payment to LOCAZ's bank account
- Pickup / return check: photos, km, fuel
- Disputes with evidence

NEW · 90-day card (basic)

- Card saved at booking (3DS once)
- Consent checkbox in French + log
- Optional hold at pickup, settled at return
- Admin "Charge" button with proof, caps and 90-day limit
- Payment link if a charge fails

2 · 90-DAY CARD PROTECTION

How it works for one rental

1

Booking

Card saved by Stripe (3D Secure once). Customer ticks the consent box. Consent is logged with date, IP and terms version.

2

Pickup

Optional hold on the card (e.g. €800), placed when the vehicle is handed over.

3

Return

Damage or fuel: capture from the hold, or charge the saved card. Hold released otherwise.

4

Up to D+90

FPS, tolls, towing, ticket admin fee: charged off-session with the proof attached and emailed.

5

D+90

Window closes. New charges are refused by the server.

Hold vs saved card

- **Hold:** blocks money; valid about 7 days. Used for damage found at return.
- **Saved card:** no money blocked; usable for 90 days (LOCAZ rule). Used for charges that arrive later.

Traffic fines (radar, red light)

- Never charged by LOCAZ.
- LOCAZ designates the driver on ANTAI (legal deadline: 45 days); the fine goes to the renter.
- LOCAZ only charges its admin fee (e.g. €25).

Our review: the approach is right, with 5 adjustments

✓ Agreed as written

- Saved card for the 90 days, not a long hold
- Consent in French, unchecked by default, fully logged
- Caps checked on the server, never only on screen
- Idempotency key per attempt + one charge per row
- Retry rules by decline type; payment link as fallback
- Refunds always executed at Stripe
- Evidence kept 13 months; card data only at Stripe

Adjustments

- **Contrazy = Stripe Connect:** the customer and card are saved on **LOCAZ's own Stripe account**; payouts go straight to LOCAZ.
- **One Stripe customer per client**, reused for every booking (not one per booking).
- **Longer rentals:** Stripe can hold up to 30 days for car rental (Visa, Mastercard, Amex) if enabled on the account. This is an option instead of skipping the hold.
- **Retention:** the spec keeps ID copies 13 months; the current privacy policy says 12. One value must be chosen and published.
- **Legal sign-off** of the consent wording and price schedule before launch, as the spec says.

4 · SCOPE

Your spec: what's in the 3,000 USD, what's an add-on

	Included in launch version (basic)	Add-on: full automation (spec V1)	Phase 2 (spec)
Card & consent	Card saved at booking or "card as security"; French consent + log (§4, §6)	Card-update link when a card has expired	—
Hold	Hold at pickup, capture or cancel at return (§5)	—	—
Charging	Admin charge with proof, global + per-type caps, 90-day guard, idempotency, webhooks (§7–§9, §13)	Versioned caps table; D+75 alert; automatic card detach after D+90	—
Failures	Payment link sent by the admin (§10)	Automatic retry schedule by decline type; reminders D+3, D+7, D+14; debt-collection flag	Monitoring & alerting (§17)
Refunds & disputes	Partial refunds by admin; dispute email to admin (§11, §15 minimum)	Full 15-scenario QA pass in Stripe test mode (§18)	Dispute workflow; roles, two-person approval, audit log (§15–§16)

Add-on and Phase 2 are quoted separately.

5 · IDENTITY CHECK

Didit vs Stripe Identity

	Stripe Identity (in Contrazy today)	Didit (your suggestion)
Price	About $1.50 per verification (first 50 free)	**500 full checks free every month**, then $0.33 per full check
What's checked	ID document + selfie	ID document + liveness + face match + device/IP
Integration	Already built and working	Hosted flow + webhook; needs to be added to Contrazy
To verify	—	Driving licence support (documents are still uploaded in Contrazy either way)

Proposal: launch with Stripe Identity (already built). Switching to Didit is a small add-on that makes identity checks free at LOCAZ's volume.

6 · INVESTMENT & NEXT STEPS

3,000 USD upfront, and we start

3,000 USD

Launch version + basic 90-day card · 100% upfront by payment link

- Your own web app, for life
- Code and data 100% yours
- No subscription, no licence fee
- Demo at each step

Quoted separately

- Full 90-day card automation (spec V1 add-on)
- Didit identity check integration
- Phase 2: devices, disputes workflow, roles, monitoring
- Third-party costs: Stripe fees, hosting, devices

To start

- You confirm → I send the payment link → work starts on payment
- Connect Stripe in Contrazy (about 10 min, business type "car rental")
- Domain access for locaz.co/booking
- Legal check of the consent text and price schedule
